

TML estimates of mean counterfactual HIV-1 infection risk under shifted CD4+ polyfunctionality

with pointwise confidence intervals, working linear MSM ($\hat{\beta}_{\text{TMLE}} = -0.0031$), and post-hoc spline MSM

TML estimates of mean counterfactual HIV-1 infection risk under shifted CD8+ polyfunctionality

with pointwise confidence intervals, working linear MSM ($\hat{\beta}_{\text{TMLE}} = -0.013$), and post-hoc spline MSM
